

Remarks

I have amended my claim to show the structure of a Page-Keeper which uses elastic and centered beads, to use on a book that is functional and attractive and will not harm the book. The Page-Keeper is different than other bookmarks in that it is simple to use, won't fall out of the book and also attractive on the outside. This also makes the book easily distinguishable from other books. The Page-Keeper will remain in place until you move it.
